

PhitDocs

Central Repository of Information most programs have monitoring records in their own version of a database (Access or Excel) and they have to retrieve the drug testing records from their third party administrator. PhitDocs resolves the issue of maintaining separate databases and integrates the drug testing information along with all other monitoring records.

Reduction of Turnaround time having all of the information integrated into one database reduces the length of time it takes for drug testing results to be received by the program.

Allows for easy retrieval of information/comparison when a positive test result is received the first questions that arise are "Is this a reflection of a medication for a legitimate medical condition" and "what is the participant's drug of choice". PhitDocs houses all participants' medication records, so it is easy to retrieve a participants prescriptions and also houses their drug of choice history for easy comparison.

Allows for easy identification of patterns specific gravity and creatinine ranges may indicate adulteration or substitution and PhitDocs allows a program to easily discern any patterns in this regard. Also, when participants travel, work schedules interfere with submission of samples, etc., PhitDocs allows patterns of this nature to be more easily discernable.

All of these dynamics coupled with the other modules which comprise PhitDocs helps programs become more attentive and sensitive to their participants performance and provides useful information so the program can intervene before actual substance use occurs or at the earliest possible opportunity for detection.

INTEGRATED LAB REPORTING

More information: To arrange a virtual demo and find out how PhitDocs can catapult your program, please Call **1(888)349-8766** or send us an Email at **info@geninf.com** or visit us on web at **www.phitdocs.com**
