

PhitDocs

Using a new program should not mean creating an information island, but this is what mostly happens. Fortunately Phitdocs takes a different approach...

If you have entered a contact in Outlook no need to enter it again in Phitdocs or vice versa. Phitdocs has two way communications with most other programs. The data is stored in standard MS SQL database (included); a robust and scalable database. Through many reporting and analysis programs, like MS Excel, this can be used by users for extended usage.

All the contract and forms are created in MS Word. This allows for full editing and customization of all material by end users, easily.

The integration with PIM features of small business server means that scheduling, contact, tasks and phone logs etc are not just fully sharable between all users but also available offline through a browser and even a windows powered smart phone.

The similar feel and look of the program to standard windows programs, make it easy to learn. The clear tutorial and step by step instructions in user manual are simple to follow and there is live support available through email and live support.

- INTEGRATION WITH OUTLOOK
- EDITABLE REPORTS IN MS WORD
- REMOTE ACCESS THROUGH SBS
- SYNCHRONIZE WITH PHONE
- MS SQL – UNLIMITED DATA

More information: To arrange a virtual demo and find out how PhitDocs can catapult your program, please Call **1(888)349-8766** or send us an Email at **info@geninf.com** or visit us on web at **www.phitdocs.com**
