## Overview

The Internet is one of the greatest information resources available today, but is also a minefield of distraction and hazards. The TotalCareUntangle™ Education Package is designed to help schools and libraries in leveraging this network of knowledge while also keeping students safe and focused on learning. In particular, the Untangle Education Package can assist schools and libraries in:

1. Keeping inappropriate content out of the classroom and computer lab
2. Creating a safe learning environment
3. Achieving CIPA compliance
4. Qualifying for E-Rate funding
5. Protecting computers from spyware, viruses, and other malware

The Untangle interface is easy to navigate and manage.

## Easy, Affordable, Flexible

- **Dynamic Web Filter** - Filter websites by critical categories for CIPA such as Pornography, Illegal Drugs, Dating, and Hate and Aggression, as well as manage access to web mail, shopping, proxies, and other sites.
  - Control Internet usage with 53 categories that cover over 100 million URLs.
  - URLs not yet categorized are processed and classified in real-time, allowing you to stay one step ahead of your students.
  - Block https/ssl sessions by IP, thwarting a popular workaround for standard web filtering solutions.
- **Control Instant Messenger and other P2P applications** - port hopping applications such as instant messenger and BitTorrent can bypass standard firewall rules, consume network traffic, introduce malware, and open a door for child predators. TotalCareUntangle™ allows you to control these applications.
- **Block Viruses, Spyware, Spam, Phish, and Other Malware** - TotalCareUntangle™ scans all traffic including http and ftp for viruses, worms, spyware, phishing, and other threats to protect your network and the personal information of your students.
- **Monitoring** - TotalCareUntangle™ Reports lets you see who is doing what on your network, including reporting by active directory user name. This lets you monitor for violations of your acceptable use policy and identify suspect behavior.
- **Policy Management** - Create an unlimited number of web usage policies based on user and/or time of day, including rules appropriate for teacher, staff, and students as well as different age groups.

*“Untangle provides the features and performance we need at a price that is hard to beat.”*
