Now There Is A Better Way To Manage Your Network

TotalCareUntangle™ delivers an on-demand suite of applications that run on a single server and will change the way you think about network software. Untangle lets you:

- **Control** network activities that reduce productivity such as spam and inappropriate web surfing,
- **Enable** anytime anywhere access for remote employees, and
- **Protect** your computers and data from outside threats such as viruses, spyware, botnets, and phishing.

The Untangle interface is easy to navigate and manage.

Powerful Management and Control Features

TotalCareUntangle™ supports advanced networking and management capabilities. To deliver maximum performance and reliability, Untangle can be configured to split network traffic across multiple Internet connections. Further, Administrators can address important business needs including enforcing multiple web usage policies, leveraging an active directory implementation, and providing “anytime anywhere” access to the intranet for remote employees:

- Full reporting
- Automatic updates
- Active Directory Integration
- Policy Management (user & time of day)
- US-based support
- And much, much more

TotalCareUntangle™

Customer Testimonials

"We've experienced zero spyware issues since we installed Untangle."

Christopher E. Christiansen
Director, IT Services
CeloNova BioSciences, Inc.

"Right away, spam was down ninety-five percent."

Brian Welker
President
Sunridge Properties, Inc.

"We have peace of mind knowing that we are protected."

Craig Brown
Controller
Summer Hill Ltd.

"Nobody has ever supported me the way Untangle has. It's been remarkable."

Dan Nickason
IT Manager
Genesis Physicians Group

Never Trade Off Performance

Untangle's Network Virtualization technology eliminates the large latencies associated with moving data through multiple applications. Compared with the legacy method of proxy chaining, Network Virtualization does not require excess context switches and buffer copies that can result in exponentially growing time delays with each new application. With Untangle, your data flows at full speed.

TotalCareUntangle™ Network Virtualization technology shares traffic data across all software services with minimal latencies.

Built for the Future

TotalCareUntangle™ is a standalone appliance or a managed appliance. As new applications are released, more can be activated as needed. You don't need to purchase new hardware for your network. Untangle protects your investment and keeps you up-to-date with the latest innovations in network technologies.

Affordable & Easy to Get Started

TotalCareUntangle™ delivers unprecedented value for your IT dollar. Say goodbye to per user licensing. Untangle keeps it simple with a single subscription sized for your company. And with Untangle's ease of implementation, you can try new applications in a matter of minutes without disruption to the rest of your network.

Management Options

TotalCareUntangle can be installed on almost any Intel-compatible server. For more information go to: www.geninf.com/untangle.
